Treatment and prognosis of colorectal cancer with synchronous peritoneal metastases

Retrospective study
371 patients were enrolled from 2007 to 2018

- n=235
- n=136

76% died during follow-up
Median follow-up 44 months

36% had extraperitoneal metastasis

- 31% did not undergo CRS
- 24% received CRS of CC0–1
- 45% received CRS of CC2–3

59% received chemotherapy
29% received HIPEC

Median OS
All patients, 15 months
Undergoing CRS, HIPEC and chemotherapy, 29 months

CRC patients with SPM who receive comprehensive treatment might achieve better prognoses
